The Big Extrapolation ................................................................ xxii

Getting Started
Chapter 1: Improving the Safety and Quality of Health Care in Canada .................................................. 1
Chapter 2: Frameworks for Improving Safety and Quality ......................................................................... 19
Chapter 3: Measurement and Improvement of Safety Culture ..................................................................... 41

The Eight Essential Elements
Element 1: Timely Recognition and Diagnosis .......................................................... 59
Chapter 4: Entering the Medication-Use System and Dealing with Drug-Related Problems .................... 61
Chapter 5: Timely Recognition and Diagnosis of Illness ......................................................................... 79

Element 2: Safe, Accessible, Cost-Effective Medications ................................................................. 95
Chapter 6: Pharmacoepidemiologic Methods for Assessing Safety and Effectiveness ................................. 97
Chapter 7: Pharmaceutical Policy ........................................................................................................ 117

Element 3: Appropriate Prescribing ..................................................................................................... 159
Chapter 8: Appropriate Prescribing ..................................................................................................... 161
Case: The Dalhousie Academic Detailing Service: Designing an Intervention on the Topic of Osteoarthritis ......................................................... 187

SAFE AND EFFECTIVE

Element 4: Distribution and Tailored Patient Advice ........................................ 201
Chapter 9: Optimal Drug Distribution Systems in Acute Care Facilities ............... 203
Chapter 10: Information for Patients about the Benefits and Harms of Medications .......... 233
Case: Applying Failure Mode and Effects Analysis and Root Cause Analysis to Medication Errors .... 251

Element 5: Patient Participation and Intelligent Adherence .................................... 267
Chapter 11: Patient Health Care Behaviours Related to Medication Use and Adherence .......... 269
Chapter 12: Patients’ Expectations of and Satisfaction with the Medication-Use System ........ 289

Element 6: Monitoring ......................................................................................... 303
Chapter 13: Pharmaceutical Care and Safe and Effective Medication Use ............... 305
Chapter 14: Improving Medication Safety during Transitions of Care ....................... 319

Element 7: Documentation and Communication .................................................. 337
Chapter 15: Importance of Communication and its Impact on the Delivery of Safe and Effective Medication Therapy ................................................................. 339
Chapter 16: Documentation of Medication Use and Outcomes ............................... 357
Case: Multiservice Experience with Medication Reconciliation in the Cape Breton District Health Authority ................................................................. 369
Case: Medication Reconciliation: A Pilot Project in the Calgary Health Region ............ 393

Element 8: System Evaluation, Measurement, and Improvement ............................ 415
Chapter 17: Performance Measurement of the Medication-Use System .................... 417
Chapter 18: Medication Incident Reporting Systems ............................................. 435
Case: Creating a Bridge between Quality and Safety: The Balanced Scorecard and Stroke Medication .... 455

Wrap-up
Chapter 19: Where Do We Go from Here? ......................................................... 465

Glossary: Adverse Drug-Related Consequences .................................................. 471

Index .................................................................................................................. 475
