MEDICATION ASSESSMENT AND MANAGEMENT

Providing Effective Medication Assessment and Management Services in Your Community Pharmacy

Description

Pharmacists in different provinces across Canada are now reimbursed for many medication review, medication assessment and care plan professional services. This two-part Continuing Education Certificate course provides community pharmacists with basic knowledge and processes, as well as practical exercises, to begin delivering high-quality medication assessment and management services to their patients.

Topics include the main components of a comprehensive medication review (including assessment), approaches to identifying drug therapy problems, care plan development, effective documentation and strategies for follow up. The program also provides a summary of and online access to information and available resources from existing provincial medication review, assessment and care plan reimbursement programs.

Modules include:

MODULE 1: Assessing, Identifying DTPs and Developing Care Plans

5.0 CEUs

- Describe the three main components of medication review: medication assessment, care plan and follow-up evaluation.
- Identify essential information to elicit for a medication assessment.
- Reflect on a systematic approach for identifying DTPs.
- Identify and describe the components of a care plan and a follow-up evaluation.
- Develop a written care plan for patient scenarios including solution-focused suggestions, monitoring/follow-up plans.
- Use criteria to self-assess the completeness and effectiveness of a care plan.
- Identify steps for further learning and available resources to complete medication reviews efficiently and effectively, and develop an action plan to address further learning.

MODULE 2: Implementing Care Plans and Documentation

3.0 CEUs

- Reflect on how a care plan can be implemented in the community pharmacy practice setting.
- Reflect on elements of successful communication and collaboration with other health care professionals as it pertains to medication review/assessment.
- List essential components of a documentation note in a medication review/assessment.
- Complete a written documentation note for a patient scenario.
- Utilize criteria to self-assess the effectiveness of a documentation note.
- Identify steps for further learning and available resources to complete medication reviews efficiently and effectively, and develop an action plan to address further learning.

Providing Effective Medication Assessment and Management Services in Your Community Pharmacy

Accreditation and Completion Requirements

This two-module course has been accredited as a continuing education certificate program under file #8002-2016-1789 for 8.0 CEUs by the Canadian Pharmacists Association (CPhA), a CCCEP-approved accredited provider. To earn the continuing education certificate for each module, participants must complete all module requirements including all quizzes, written assignments, self-assessments and self-reflective activities. Complete details on these items are provided within the program.

Participants who achieve the certificates of completion may state that they hold a:

- Continuing Education Certificate in Medication Assessment and Management: Module 1 (Assessing, Identifying DTPs and Developing Care Plans)
- Continuing Education Certificate in Medication Assessment and Management: Module 2 (Implementing Care Plans and Documentation)

The course certificates do not provide participants with professional certification credentials.

Availability

This self-directed online course is available up until its accreditation expiry date of June 24, 2018. Annual accreditation renewal is expected. We recommend you complete the course within 90 days of registration.
