Today's Speaker

Arden Barry, BSc, BSc(Pharm), PharmD, ACPR

Clinical Pharmacy and Research Specialist,
Lower Mainland Pharmacy Services, Primary
Care Clinic, Chilliwack General Hospital and
Heart Function Clinic, Abbotsford Regional
Hospital and Cancer Centre

Assistant Professor (Partner), Faculty of
Pharmaceutical Sciences, University of British
Columbia

Disclosure

- I have **no** current or past relationships with commercial entities
- I have **not** received a speaker's honourarium for this learning activity
- I am a member of the primary panel of the Canadian Cardiovascular Society (CCS) guidelines for the management of dyslipidemia for the prevention of CVD in the adult

Learning Objectives

1. Gain an appreciation for recent evidence to support/refute the role of non-statin therapy in combination with statin therapy;
2. Understand the mechanism and role of proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitors in the management of dyslipidemia;
3. Identify clinical scenarios where non-statin therapy may be considered as add-on to statin therapy in the management of dyslipidemia.

LDL-C Hypothesis

- Cholesterol is a component of atherosclerotic plaques
- Atherosclerosis can be experimentally produced in herbivores
- Higher LDL-C is associated with a higher risk of CVD
- Patients with genetic LDL-C disorders have a high risk of premature CVD

However...

- ↓ LDL-C with Rx does not necessarily equal ↓ CV events

Non-Statin Therapy

- Bile acid sequestrants
- Anacetrapib
- **Ezetimibe**
- **Fibrates**
- Lomitapide
- Mipomersen
- **Niacin**
- **PCSK9 inhibitors**

Poll Question

- What do you typically recommend in addition to statin therapy?
1. Ezetimibe
 2. Fibrate
 3. Niacin
 4. PCSK9 inhibitor
 5. Nothing

CANADIAN
PHARMACISTS
ASSOCIATION ASSOCIATION DES
PHARMACIENS
DU CANADA

PHARMACY PRACTICE WEBINAR | www.pharmacists.ca

Poll Question

- Have you ever recommended/had a patient on a PCSK9 inhibitor?
 1. Yes
 2. No

Ezetimibe

CANADIAN
PHARMACISTS
ASSOCIATION ASSOCIATION DES
PHARMACIENS
DU CANADA

PHARMACY PRACTICE WEBINAR | www.pharmacists.ca

Ezetimibe

- SHARP:
 - 9270 patients with CKD
 - Ezetimibe 10 mg PO daily and simvastatin 20 mg PO daily vs placebo
 - Follow-up: 4.9 yr
 - Reduced major CV events by 2.1% (NNT=48)
 - No significant reduction in mortality

Lancet 2011;377:2181-92

PHARMACIENS
DU CANADA

PHARMACY PRACTICE WEBINAR | www.pharmacists.ca

Ezetimibe

- IMPROVE-IT:
 - 18,144 patients with a recent ACS
 - All patients on simvastatin 40 mg PO daily
 - Ezetimibe 10 mg PO daily vs placebo
 - Follow-up: 7 yr
 - Reduced major CV events by 2% (NNT=50)
 - No significant reduction in mortality

N Engl J Med 2015;372:2387-97

CCS Dyslipidemia Guidelines

- Ezetimibe 2nd-line in patients with CVD if LDL-C target not achieved on maximally tolerated statin
- Do **not** recommend niacin + statin in patients who have achieved LDL-C target
- Do **not** recommend fibrates + statin in patients who have achieved LDL-C target
- Consider PCSK9 inhibitor if LDL-C target not achieved on maximally tolerated 1) statin ± ezetimibe in patients with CVD or 2) statin in patients with heterozygous FH

Key Points

- Always titrate statin to maximally tolerated dose before considering addition of non-statin therapy
- Consider ezetimibe or PCSK9 inhibitor for certain patients based on the evidence
- Fibrates and niacin have questionable (if any) role as add-on therapy to reduce CV events

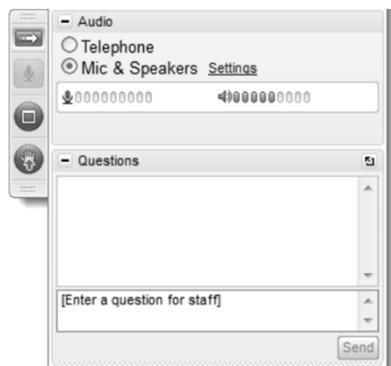

CANADIAN PHARMACISTS ASSOCIATION / ASSOCIATION DES PHARMACIENS DU CANADA
